SUMMARY

Software Engineer focused on building reliable, scalable backend systems and production-ready applications.

EXPERIENCE

AI Intern

Jun 2025 – Oct 2025

Diebold Nixdorf

Mumbai, India

- Adapted and refactored an **open-source** system for enterprise use, improving **modularity** and **maintainability**.
- Designed and developed a modular **Retrieval-Augmented Generation (RAG)** system supporting multiple **LLM** backends.
- Developed and integrated a **MobileNetV2**-based UI classification system (**90% accuracy**) into backend decision workflows.
- Fine-tuned **language models** using **PEFT (LoRA)**, improving domain-specific instruction accuracy by **20–25%**.

PROJECTS

Krecon | *FastAPI, PostgreSQL, Milvus, LangChain, Gemini, Docker, LangGraph*

2026 – Present

- Built an AI-powered creator collaboration platform with modular **AI agents** for campaign briefing, semantic creator discovery, and creator ranking.
- Developed **RESTful** backend services using **FastAPI**, **PostgreSQL**, and **SQLAlchemy** with **JWT** authentication and **bcrypt** password hashing for secure APIs.
- Implemented semantic creator discovery using **Sentence Transformers**, **Milvus**, and **LangChain**, followed by **Gemini**-based creator ranking with **Pydantic** structured outputs.
- Implemented a **LangGraph**-based multi-agent workflow for campaign briefing, semantic creator discovery, and creator ranking.
- Integrated **LangSmith** for tracing AI pipelines and containerized the application using **Docker** and **Docker Compose** with PostgreSQL, Redis, and Milvus.

IndiraGPT | *FastAPI, ChromaDB, LLaMA 3.3, Sentence Transformers*

2025

- Built an AI-powered help desk chatbot using **RAG** to answer college-related queries.
- Designed a multi-stage crawler to index **HTML**, **PDFs**, and image metadata for retrieval.
- Optimized chunking and retrieval across **1,500+ chunks**, reducing hallucinations by **40%** in manual QA.

URL Shortener | *Python, FastAPI, PostgreSQL, Redis, SQLAlchemy, Docker*

2026

- Built a URL shortening API using **FastAPI**, **PostgreSQL**, and **SQLAlchemy** with validation, expiration, and unique short codes.
- Implemented **Redis caching** and rate limiting, reducing redirect latency by approximately **40%** and limiting clients to **100 requests/minute**; containerized with **Docker Compose**.

EDUCATION

Indira College of Engineering and Management

Pune, India

Bachelor of Engineering in Artificial Intelligence and Data Science

Aug 2023 – May 2027

- CGPA: 8.48/10**

TECHNICAL SKILLS

Languages: Python, Java, C++, SQL, JavaScript

Frameworks: FastAPI, Flask, SQLAlchemy, LangChain

Databases: PostgreSQL, MySQL, MongoDB, Milvus, Redis

AI/ML: TensorFlow, Hugging Face, Sentence Transformers, RAG, PEFT/LoRA, FAISS, GenAI, Agentic AI, Pandas, NumPy, LangGraph, MCP

Developer Tools: Docker, Git, Linux, AWS (S3)

CERTIFICATIONS

Oracle Certified Professional: Agentic AI Foundations Associate (1Z0-1157-26) 

Machine Learning — Andrew Ng, Stanford Online / Coursera
